МАСТЕР-КЛАССЫ SHANYRAQOPEN

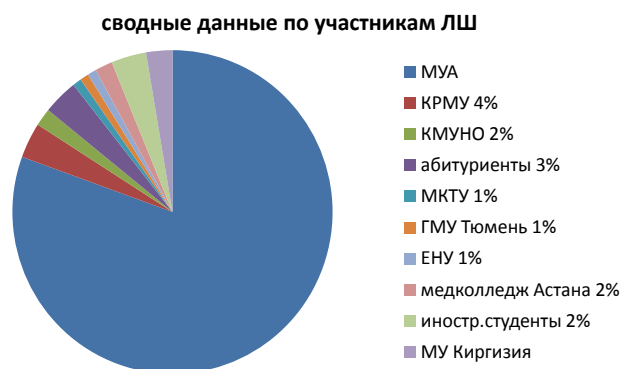

Competitive tasks of the Olympiad in Medicine were held in sections: Surgery, Internal diseases, Pediatrics, Biomedicine and Dentistry.

Successfully held the first Olympiad in medicine at a high level was the reason for the annual international Olympiad in our University, the geography of which is expanding every year.

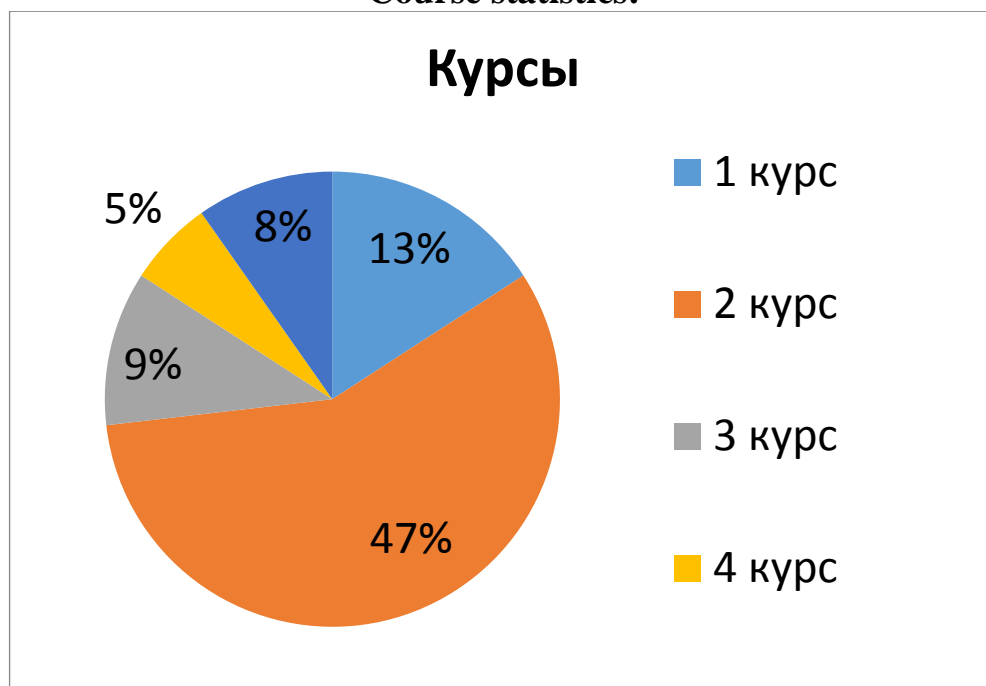

As part of the summer semester at the initiative of the Dean's office in the walls of the Medical University of Astana for the first time started a Summer School. Additional educational program includes elective courses "Introduction to surgery", preventive medicine, "Basics of medical massage and exercise therapy", "Organization of work and conducting physiopsychoprophylactic preparation for childbirth", "System of maintenance and prolongation of health". Every year the Summer School program expands and extends beyond one University and the country. Visiting classes, master classes and seminars of leading professors, mentors will allow the student not only to expand and deepen theoretical knowledge, but also to work out practical skills, to determine the choice of future profession in the field of medicine, to acquire new competencies in new and popular areas in medicine. The annual Summer School has been implemented within the framework of academic mobility during the summer semester in partner universities of foreign countries, where students can combine the passage of intensive academic and cultural and educational programs.

Every year, the number of students registered for the summer semester continues to grow. The format of the Summer school becomes attractive not only for students of our University, but also students, applicants, students of other universities and countries become active listeners.

Course statistics:

GPA (средний балл):

111 responses

**Summer school in the framework of academic mobility
at Akdeniz University**

- **Lectures:** Morphology, pathology, clinical systems: respiratory, digestive, nervous and cardiovascular system, main building, lecture hall of the faculty of Medicine Akdeniz University
- **Master classes:** Thoracic, General, plastic surgery, neurosurgery, cardiac surgery, laboratory of the faculty of Medicine
- **Practice:** Visit and participate in operations (plastic, neuro - and General surgery, gynecology)
- **Admission and management of patients** (Chair of endocrinology, infectious diseases, cardiology)
- **Duty** of 12 hours a day in neurosurgery.

Kazakistanlı doktor adaylarının tercihi AÜ

(DHA) - AKDENİZ Üniversitesi (AÜ) Tıp Fakültesi'ne Erasmus kapsamında Kazakistan'dan gelen öğrenciler, Antalya'yı tercih etmelerinde, daha önce Türkiye'yi aileleriyle birlikte ziyaret etmeleri ve Türkiye'deki öğrenci arkadaşlarının anlatımlarının etkili olduğunu söyledi.

Eğitim - 2019-08-06 10:35:23

The beginning of the new academic year at the faculty of Medicine was marked by the formation of a new inclusive group of students (385 group) from among the students of the Kazakh, Russian and foreign faculties, who have a high GPA result and a leading role in the social life of the University, as well as academic achievements in scientific and design works.

Currently, among the global trends in education, inclusion, its understanding and implementation are becoming increasingly relevant. The philosophy of inclusion has broad aspects, and in particular educational inclusion in form, language and other types of learning. Students and faculty of NJSC "AMU" have the opportunity to acquire and improve knowledge in cooperation with Nazarbayev University, school of medicine and school of higher education.

Of the 45 people who want to study in an inclusive group, 13 students were selected on a competitive basis that meet the specified requirements: 5 students of a foreign faculty, 7 students of the Kazakh Chair and 1 student of the Russian Chair of the faculty "Medicine":

1. Abilhamitova Kymbat Talgatovna;
2. Irfan Abass;
3. Junaid Sheikh Hammed;
4. Elshibek Azat Kuatbekuly;
5. Kusainova Gaukhar Garifullakzy;
6. Kaiser Hilal;
7. Kuzar Sayazhan Nurlanovna;
8. Murat Anelya Muratovna;
9. Umar Gani;
10. Omirserikova Aya Zhalelovna;
11. Razakhbergenov Rakhymbek Bektibayuly;
12. Rizabekov Adil Yerzhanovich;
13. Sarkar Imran Hussain.

The purpose of creating such a group was the desire of the students themselves to participate in this project. Classes in the group are held in English. Students of a foreign faculty, going beyond their comfort zone, can take an active part in the scientific, social and other spheres of university life only in direct contact with the same students, develop projects, conduct joint research, and learn to communicate with the local population during practice. An important component of this training for all students is the development and integration of professionally-communicative and intercultural aspects of communication.

Kazakh students, in turn, relying on the main sources of domestic authors of medical literature, can expand and Supplement knowledge by studying the experience of world publications in medicine, thereby ensuring a progressive and systematic nature of qualitative and conscious perception and development of knowledge in preparation for the delivery of one of the most complex test programs USMLE WORLD. High motivation of students, teamwork, development of leadership qualities and a sense of responsibility stimulates the work of the teaching staff of the University.

The academic year in the new group began at the Chair of pathological physiology named after V. G. Korpachev. In the educational process of the exclusive group for the first time was applied an innovative method of "Advanced training", which allowed students to get acquainted with the individual elements of the educational content, providing a detailed study of the material in the next cycle of another module. A special lively interest in the studied material was aroused in students when discussing issues related to specific nosologies and interpreting the application of the knowledge in the future.

As is known, advanced training stimulates the development of clinical thinking of students, promotes independent acquisition of knowledge and allows you to find connections of fundamental theoretical knowledge with the experience of their application in future professional activities. Conducting classes in such a group allows the teacher at all Chairs to creatively and fully test and implement projects, new methods and means of training, which will undoubtedly have a mutually beneficial positive effect.

It should be noted that there are more students willing to study in this format, both from foreign students and Kazakh and Russian-speaking Chairs of the faculty
